Solutions. A stock solution is prepared by weighing out an appropriate portion of a pure solid or by measuring out an appropriate volume of a pure liquid, placing it in a suitable flask, and diluting to a known volume. Exactly how one measure's the reagent depends on the desired concentration unit. For example, to prepare a solution with a known

chemistry), or chemical species is a substance or chemical constituent that is of interest in an analytical procedure.

The purest substances are referred to as analytes. Example : 24 karat gold, NaCl, water, etc. In reality, no substance has been found to be 100% pure in its quality, so we call a substance that is found to be most pure (for some metals, 99%
