of a 4-bit capacitor DAC. 12.15 A bias generator is required to generate 16 steps from 0 to $100\ \mu\text{A}$ to bias an amplifier.

Design a CMOS DAC to do this, assuming the presence of a $50\ \mu\text{A}$ reference current.

12.16 Differential circuits provide good noise immunity and have the advantage of dual rail inputs and outputs.
