How to Recognize When Your Loved One Is Dying
Phylogial death occurs when the vital organs no longer function. The digestive and respiratory systems begin to shut down during the gradual process of dying. A dying person no longer wants to eat, as digestion slows and the objective track slows maintenance and chewing, swallowing, and elimination become painful processes.

The Process of Dying / Lifestyles Development
During the dying process, the body's systems shut down. The dying person has less energy and begins to sleep more and more. The body is conserving the little energy it has, and as a result, needs less nourishment and sustenance. In the days (or sometimes weeks) before death, people eat and drink less.

What happens during the dying process? (HealthNuts)Net
Death is a part of the life cycle and something everyone will go through. Being aware of the stages one goes through at the end of life will give loved ones an opportunity to be less fearful. Knowing what to expect will allow you to be present in the moment without ever feeling truly alone.

Stages of the Dying Process and What to Expect...

1. Just as one is losing patience you lose, the dying person is in the process of losing everyone and everything they love. It is only normal to be withdrawn. If the patient is allowed to express his/her sorrow, the stage of final acceptance will be easier. If the person is unresponsive, remember hearing remains all the way to the end.

There's no circulation, and no new reserves of oxygen are reaching cells. However, clinical death also declares that this is a point where the process is irreversible, by means of CPR, transfixion or ventilation. The point of no return is biological death, which begins about four to six minutes after clinical death.
