The scope of an Agile project is defined by high level requirements, in the form of User Stories, scheduled in the Release Plan. Detailed (or deep) requirements are still necessary but they are only created when they are needed - this is the focussed bit.

Agile Project Scope | It's a Delivery Thing

Scope Management with Agile Approaches Project teams attempt to identify and document complete scope at the beginning of the project, when the teams are the least informed about the product. The product owner gathers high-level requirements at the beginning of the project, breaking down and further detailing requirements that are going to be implemented in the immediate future.

What's Different about Agile Scope Management? - dummies

Scope creep can be a problem for agile If the product owner is naive about how this works. When new items go into the backlog, they need to go in an order of priority. The Product Backlog is an ordered list of backlog items. If a new item goes into the backlog, above other items, it is effectively "pushing them out of the way".
