### The Risks of Rushing a COVID-19 Vaccine - Scientific American

When inactivated vaccines are produced correctly, the risks lie in the countless variables that affect a body's reaction, including the person's immune system (which are not fully developed in young children, and often weakened in the elderly); physical condition (are they pregnant or ill?); and environment (including exposure to other forms of the virus). " The risks of vaccines are lower now than in the past because production is much better than it used to be."
