Geosteering is the optimal placement of a wellbore based on the results of realtime downhole geological and geophysical logging measurements rather than three-dimensional targets in space. The objective is usually to keep a directional wellbore within a hydrocarbon pay zone defined in terms of its resistivity, density or even biostratigraphy.

Without geosteering and MWD equipment, horizontal drilling practices would be nearly impossible. Using sensors near the drill bit, your MWD rental sends a wide range of data to the surface in real time to assist with geosteering. Therefore, the more advanced your MWD equipment and information, the more precisely your crew can place the drill head.
