### Distance Learning - Stone Science

DNA is a long polymer made from repeating units called nucleotides, each of which is usually symbolized by a single letter: either A, T, C, or G. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds.Both chains are coiled around the same axis, and ...

### DNA - Wikipedia

Molecular Basis # 3. DNA Cloning: If a foreign DNA molecule is introduced into a replicating cell, it permits the amplification (production of many copies) of the DNA. In some cases, a single DNA fragment to be cloned can be isolated and purified.

DNA is a very long and coiled molecule found in the nucleus, or command center, of a cell. It provides the full blueprint for the construction and operation of a life-form, be it a microbe, a bird, or a human. The information in DNA is stored as a code made up of four basic building blocks, called nucleotides.
