Biochemistry and Molecular Biology. At its most fundamental level, the study of life is the study of chemical processes. A major in biochemistry and molecular biology trains you in the experimental techniques used to probe the structures and functions of biologically important molecules. The strong laboratory and research focus of this major prepares you for graduate study or to enter careers in high-growth areas such as biotechnology and health care research.

Biochemistry and molecular biology are sub-disciplines within the larger, more general area of biological sciences. The study of biochemistry and molecular biology requires that students be genuinely interested and able to perform successfully in the "quantitative" sciences and that they have acquired a solid foundation in biology, chemistry, mathematics, and physics in their high school or community college careers.
