Blood And The Lymphatic System

The lymphatic system can be thought of as a drainage system needed because, as blood circulates through the body, blood plasma leaks into tissues through the thin walls of the capillaries. The portion of blood plasma that escapes is called interstitial or extracellular fluid , and it contains oxygen , glucose , amino acids , and other nutrients needed by tissue cells.

lymphatic system | Structure, Function, & Facts | Britannica

The lymphatic system has three main functions:. It maintains the balance of fluid between the blood and tissues, known as fluid homeostasis. It forms part of the body's immune system and

helps ...

Lymphatic system: Definition, anatomy, function, and diseases

The lymphatic system is a network of delicate tubes throughout the body. It drains fluid (called lymph) that has leaked from the blood vessels into the tissues and empties it back into the bloodstream via the lymph nodes.

Lymphatic system - Better Health Channel

The lymphatic system, or lymphoid system, is an organ system in vertebrates that is part of the circulatory system and the immune system. It is made up of a large network of lymphatic vessels, lymphatic or lymphoid organs, and lymphoid tissues. The vessels carry a clear fluid called lymph (the Latin word *lympha* refers to the deity of fresh water, "Lympha") towards the heart.

circulation; it contains white blood cells called lymphocytes, which fight infection

The lymphatic system - what is it and how does it work ...

The lymphatic system is a network of tissues, vessels and organs that work together to move a colorless, watery fluid called lymph back into your circulatory system (your bloodstream). Some 20 liters of plasma flow through your body's arteries and smaller arteriole blood vessels and capillaries every day.

Lymphatic System: Parts & Common Problems

The lymphatic system consists of open-ended vessels, lymph nodes, and organs such as the tonsils, spleen, and thymus. Unlike the blood vascular system, lymphatic circulation is not a closed loop. It creates a one-directional flow of lymph towards the heart. Lymph reenters the cardiovascular system at subclavian veins situated near the neck.
