Dreamstime. To effectively pump blood throughout the body, CPR compressions must be hard. Generally, experts suggest individuals performing CPR aim for a depth of 5.5 centimeters (approximately two inches) for each compression. It takes roughly sixty pounds of force to compress the chest by this amount.

AS Level Biology Edexcel Revision Guide: Parsons, Richard ...

In order to perform correct compressions, you need to use the full weight of your upper body, not just the arms. Push straight down on the victim's chest, without bending your elbows, and try to compress the chest at least 5 cm. The compression rate should be 100 - 120per minute (roughly 1.5 - 2 compressions a second).
