Systemic scleroderma, or systemic sclerosis, is an autoimmune rheumatic disease characterised by excessive production and accumulation of collagen, called fibrosis, in the skin and internal organs and by injuries to small arteries. There are two major subgroups of systemic sclerosis based on the extent of skin involvement: limited and diffuse. The limited form affects areas below, but not above ...

Systemic scleroderma - Wikipedia

Neuromuscular (NM) diseases are a common cause of morbidity and mortality. Myasthenia gravis (MG) is one such disease characterized by skeletal muscle weakness and fatigability. In essence, MG is an autoimmune disorder that results from the destruction of post-synaptic nicotinic acetylcholine (ACh) receptors located at the neuromuscular junction (NMJ).[1]

Anesthesia For Patients With Myasthenia Gravis ...

Ahmed Zaafran, M.D., is a board certified anesthesiologist at Santa Clara Valley Medical Center and Assistant Professor of Anesthesiology at Stanford University School of Medicine. He trained at The University of Texas McGovern School of Medicine in anesthesiology prior to moving to Stanford University School of Medicine as faculty in 2012.
