Plot. In 1961, the Ark, a Cybertronian spacecraft carrying an invention capable of ending the war between the Autobots and the Decepticons, crash lands on the dark side of Earth's Moon. The crash is detected on Earth by NASA, and President John F. Kennedy authorizes a mission to put a man on the Moon as a cover for investigating the spacecraft. In 1969, the crew of Apollo 11 lands on the Moon ...

In May of 1969, Apollo 10 orbited the moon, testing the lunar lander. It was a dress rehearsal for the manned landing to come. Each of the Apollo missions - and the astronauts who remained in the orbiting Command Module during the subsequent landed missions - took hundreds of high-resolution photographs of the moon's surface.

In October of 1959, the Luna 3 spacecraft launched from the Baikonur Cosmodrome in Kazakhstan. Luna 3 was the third spacecraft to reach the Moon and the first to send back pictures of the Moon's far side. The pictures were noisy and indistinct, but because the Moon always presents the same face to the Earth, they offered views of a part of the Moon that had never been seen before.
