### No solution - definition of No solution by The Free Dictionary

A missing solution is a solution that is a valid solution to the problem, but disappeared during the process of solving the problem. Both are frequently the consequence of performing operations that are not invertible for some or all values of the variables, which prevents the chain of logical implications in the proof from being bidirectional.

then there are "infinite solutions", meaning, when graphed, the two equations would form the same line. If the variables disappear, and you get a statement that is never true, such as  $0 = 5$  or  $4 = 7$ . then there is "no solution", meaning, when graphed, the two equations would form parallel lines, which never intersect. equations with many solutions or no solution When we solve a linear equation in one variable, we may find exactly one value of  $x$  that will make the equation a true statement. But, when we simplify some equations, we may find that they have more than one solution or they do not have solution.

### Equations with Many Solutions or No Solution

A solution is any number that, when replaced into the equation, will give an equality. An example of an equation without a solution is  $x = x + 1$ . No matter what number you use for " $x$ ", the right...

A value, or values, we can put in place of a variable (such as  $x$ ) that makes the equation true. Example:  $x + 2 = 7$ . When we put 5 in place of  $x$  we get:  $5 + 2 = 7$ .  $5 + 2 = 7$  is true, so  $x = 5$  is a solution. See: Variable.
