Engineering Physics Problems

Engineering is the application of scientific knowledge in order to design, build, and maintain structures, machines, devices, systems, materials and processes. Engineering is often used to develop and create new technology. Many real world problems are sufficiently complex such that an engineering approach is required to solve them.

Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.
