Yet Excel is capable of far more than the standard editing of cell contents allows, through the magic of Visual Basic for Applications scripts, or VBA. We'll briefly explore one simple example of using VBA in Excel to extract values from one worksheet , but this is just the tip of the iceberg for what Excel and VBA can accomplish together.

### Getting Values From Another Sheet in Excel Using VBA

In Microsoft Excel, you can use a macro to concatenate the data in two adjacent columns and to display the result in the column to the right of the columns that contain your data. This article contains a sample Microsoft Visual Basic for Applications (VBA) macro (Sub procedure) to accomplish this.

### VBA macro to concatenate columns of data in Excel

Some things just can't be done using native Excel. For example, I used Excel and VBA to scrape 29,000 web pages. Excel ran for 4 days by itself. Previously, my client was manually getting just 30 pages' worth of data per day, with no end in sight. Still, I like your attitude that there's so much to be used in native Excel before going to VBA.

### 6 Reasons Not To Use Excel VBA (Macros) - Data Management ...

Open the code in VBA editor (opened from within Excel using Alt+F11 on the keyboard). Right near the top find this line of text: Public Const FtInchSeparator As String = "-" Change it to include a space after the hyphen to match your data: Public Const FtInchSeparator As String = " - " It should now work. Try that and let me know how you ...

### Feet and Inches in Excel - The Engineers Toolkit

Recently I'm working on a Excel VBA project in which I need to call the rest and parse the json response.
