Basic Intravenous Therapy - Vanderbilt University

x Current consensus recommendations are to not initiate cervical cancer screening for immunocompetent adolescent females prior to age 21 years. This is in part due to very low rate of 0.8 per 100,000 new cervical cancer cases diagnosed among women ages 20 to 24 years. Timely HPV vaccination further decreases incidence of cervical cancer to 4 cases per 100,000 persons by the age of 28 years.
