Identification Of Birds In Flight

Binoculars: Birding binoculars with a wide field of view are best for in-flight identification since they allow easier tracking of the bird as it moves across the sky or in and out of brush. The optics should also be properly coated to reduce sun glare. Spotting scopes are not typically useful for identifying birds in flight since the birds will move out of a scope's view more quickly and the ...

How to Identify Birds in Flight - The Spruce

These tawny birds run across the ground in spurts, stopping with a jolt every so often to check their progress, or to see if they've startled up any insect prey. Their voice, a far-carrying, excited kill-deer, is a common sound even after dark, often given in flight as the bird circles overhead on slender wings.
