Jboss Application Server Deployment Guide

Deploying an application in JBoss is simple and easy. You just have to copy the EAR file to the deploy directory in the 'server configuration' directory of your choice. Here, we will deploy it to the 'default' configuration, so we copy the EAR file to the JBOSS_DIST/jboss-as/server/default/deploy directory.

JBoss Application Server

The JBoss Application Server ships with three server configurations. You can choose which configuration to start by passing the -c parameter to the server startup script. For instance, command run.sh -c all would start the server in the all configuration. Each configuration is contained in a directory named JBOSS_HOME/server/[config name]/. You can look into each server configuration's directory to see the default services, applications, and libraries supported in the configuration.

Administration And Configuration Guide - JBoss

JBoss EAP features a range of application deployment and configuration options to cater to both administrators and developers. For administrators, the management console and the management CLI offer ideal graphical and command-line interfaces to manage application deployment in a production environment. For developers, the range of application deployment testing options include a configurable file system deployment scanner, the HTTP API, an IDE such as Red Hat JBoss Developer Studio, and Maven .
