6th grade (Illustrative Mathematics) | Math | Khan Academy

With the concept of ratio equivalence formally defined, students explore collections of equivalent ratios in real world contexts in Topic B. They build ratio tables and study their additive and multiplicative structure (6.RP.3a). Students continue to apply reasoning to solve ratio problems while they explore representations of collections of equivalent ratios and relate those representations ...

Students' previous experience solving problems involving multiplicative comparisons, such as "Max has three times as many toy cars as Jack," (4.OA.2) serves as the conceptual foundation for understanding ratios as a multiplicative comparison of two or more numbers used in quantities or measurements (6.RP.1). Students develop fluidity in using multiple forms of ratio language and ratio ...
