The Cambrian Explosion by nature is a three-phased explosion of animal body plans alongside episodic biomineralization, pulsed change of generic diversity, body size variation, and progressive increase of ecosystem complexity. The Cambrian was a time of crown groups nested by numbers of stem groups with a high-rank taxonomy of Linnaean system (classes and above). Some stem groups temporarily ...

### Current understanding on the Cambrian Explosion: questions ...

The taxa in the classical Linnean system of biological classification are nested in a hierarchy, as required by criterion 5 in Section 1.1. But, in certain respects, chemical classification fails to meet this requirement. The phenomenon of allotropy is exhibited when an element exists in two or more distinct forms. The element carbon has ...

### Natural Kinds (Stanford Encyclopedia of Philosophy)

A classic example comes from Piagetian training studies, in which children persist in supplying incorrect answers to seemingly simple questions, even following instruction (Ginsberg & Opper 1969). In the realm of stereotyping, children and adults distort recall to conform to prior assumptions and expectations ( Liben & Signorella 1987 ).

### LEARNING FROM OTHERS: CHILDREN'S CONSTRUCTION OF CONCEPTS

Although several species belonging to the second class occasionally enter the bodies of water snails and other animals before reaching their definitive host, they undergo no alteration of form in this intermediate host; the case is different, however, in *Filaria medinensis* and other forms, in which a free larval is followed by a parasitic existence in two distinct hosts, all the changes being ...
