Since it's a search engine, browsing for books is almost impossible. The closest thing you can do is use the Authors dropdown in the navigation bar to browse by authors—and even then, you'll have to get used to the terrible user interface of the site overall.

Macruby The Definitive Guide Ruby

When I got MacRuby: The Definitive Guide by Matt Aimonetti I thought there was some chance things had changed between me and Ruby, especially via MacRuby, Apple's implementation of Ruby. It runs natively in the Objective-C runtime, but provides programmers with an alternative to Objective-C, a language that is extremely verbose, and somewhat notoriously difficult to learn.

MacRuby: The Definitive Guide - All Books

In C Ruby, the default Ruby implementation, use the gem command-line tool to install gems on your system. In MacRuby, the gem command line is prefixed to avoid conflicting with the C Ruby command. Very much like irb is available as macirb, gem for MacRuby is available as macgem.

MacRuby: The Definitive Guide - O'Reilly Media

MacRuby is Apple's implementation of the Ruby programming Language. More precisely, it is a Ruby implementation that uses the well known and proven Objective-C runtime giving you direct native access to all the OS X libraries. The end result is a first-class, compilable scripting language designed to develop applications for the OS X platform.

The Official MacRuby 2.0
Paperback Paperback

What Is MacRuby? MacRuby is an implementation of Ruby 1.9 directly on top of Mac OS X core technologies such as the Objective-C runtime and garbage collector, the LLVM compiler infrastructure and the Foundation and ICU frameworks. It is the goal of MacRuby to enable the creation of full-fledged Mac OS X applications which do not sacrifice performance in order to enjoy the benefits of using Ruby.

There are a few other, mostly older, "alternate" Ruby implementations - OMR on IBM's compiler/interpreter toolkit, IronRuby for Ruby on .NET, MacRuby to run Ruby on the Objective C libraries, Opal for Ruby-transpiled-to-javascript, MagLev for Ruby on a Smalltalk VM and many others. But JRuby, TruffleRuby and Rubinius are the current big three non-CRuby implementations.
