Biological pest control is a method of controlling pests such as insects and mites by using other organisms. It relies on predation, parasitism, herbivory, parasitody or other natural mechanisms, but typically also involves an active human management role. Classical biological control involves the introduction of natural enemies of the pest that are bred in the laboratory and released into the ...

Global warming solutions stop climate change. The 3 types are coping, stopping emissions, and absorbing current CO2. There are 9 steps you can take today.

### Global Warming Solutions: Types, Economic Benefits

When it comes to nesting, mice are skillful climbers and have no problem inhabiting the attic in your home. Due to their small size, mice can also fit into the smallest of holes, allowing them to access parts of your home you didn't think anything could fit in. Rats, on the other hand, can climb but prefer to inhabit lower levels of a structure, such as a basement or a crawlspace.

The team proposes two solutions: Composter and Fermenter. Composter is a box, in which one puts the larvae and polyethylene. To kick-start the process, one spreads a small amount of bee pollen over the polyethylene and puts the box into a warm place. At this moment, the team can observe that 100 larvae digest 2gr of polyethylene in 12 hours.

Solution: The best thing you can do for overwatered plants is give them time between waterings, and then start off watering slowly until things seem back to normal. Make sure that water is able to drain easily out the bottom of potted cannabis plants. Be extra careful with small plants in big containers.

### Over-Watering Cannabis Plants - Symptoms & Solutions

To the naked eye, all of these fleas look like nothing more than a black speck hopping across the floor. Under a microscope, however, you can see some differences in size and body morphology. Human fleas tend to be bigger than pet fleas, usually around 2 to 3.5mm in length, with a shorter, squatter abdomen.
