Check, whether the following equation has exactly one solution or infinitely many solution or no solution. $4x - 3 = 2x + 13$. Solution : $4x - 3 = 2x + 13$. Add 3 to both sides. $4x = 2x + 16$. Subtract $2x$ from each side. $2x = 16$. Divide each side by 2. $x = 8$. Justify and Evaluate : Substitute $x = 8$ in the given equation.

solution in other types of equations that are not linear, but it is also possible to have no solutions or infinite solutions. No solution would mean that there is no answer to the equation. It is impossible for the equation to be true no matter what value we assign to the variable. Infinite solutions would mean that any value for the variable would make the equation true. No Solution Equations Let's look at the following equation:
