A Process Flow Diagram - PFD - (or System Flow Diagram - SFD) shows the relations between major components in a system. PFD also tabulate process design values for components in different operating modes, typical minimum, normal and maximum. A PFD does not show minor components, piping systems, piping ratings and designations. A PFD should include:

Drinking Water Treatment: Reverse Osmosis

The currently emerging method which is gaining ground for producing fresh water form the sea water or brackish water is by the Reverse Osmosis (RO) process. In the RO process, water at high pressure passes through very fine membranes that allow only the water molecules to pass through. Plants basically consist of two phases. The first phase is a pre-treatment plant.
