Skin, Skeletal and Muscular System Flashcards | Quizlet

The insertions and origins of facial muscles are in the skin, so that certain individual muscles contract to form a smile or frown, form sounds or words, and raise the eyebrows. There also are skeletal muscles in the tongue, and the external urinary and anal sphincters that allow for voluntary regulation of urination and defecation, respectively.

Interactions of Skeletal Muscles | Anatomy and Physiology I

Integumentary, Skeletal, and Muscular Systems The construction of the tissues of the body involves developmental phenomena at two levels of organization. One is the level of individual cells, in which the cells that make up a tissue undergo increasing specialization through a process called cytodifferentiation (see discussion of restriction ...

Integumentary, Skeletal, and Muscular Systems | Clinical Gate

The skin, or integument, is considered an organ because it consists of all four tissue types. The skin also consists of accessory organs, such as glands, hair, and nails, thus making up the integumentary system. A section of skin with various accessory organs is shown in Figure 1. Figure 1 .A section of skin with various accessory organs.

Chapter 36 The Integumentary, Skeletal, & Muscular System

Skeletal muscles are attached to the skeleton by tough connective tissues called tendons (see Figure above). Many skeletal muscles are attached to the ends of bones that meet at a joint. The muscles span the joint and connect the bones. When the muscles contract, they pull on the bones, causing them to move.
