In mathematics. Four is the smallest composite number, its proper divisors being 1 and 2.. 4 is the smallest squared prime (p^2) and the only even number in this form. 4 is also the only square one more than a prime number. A number is a multiple of 4 if its last two digits are a multiple of 4. For example, 1092 is a multiple of 4 because $92 = 4 \times 23$.. In addition, $2 + 2 = 2 \times 2 = 2^2 = 4$.
