a policy requiring developers to write system tests in addition to having good unit test coverage. Without diving into the testing taxonomy, the term "system tests" refers to tests that are almost end-to-end. They start at the service API level (REST request, in my case) and go all through to the database.

Unit tests are typically automated tests written and run by software developers to ensure that a section of an application (known as the "unit") meets its design and behaves as intended. In procedural programming, a unit could be an entire module, but it is more commonly an individual function or procedure. In object-oriented programming, a unit is often an
