The protections permitting capture described above apply only to apps. Android system components can capture playback by default. Many of these components are customized by Android vendors and support features like accessibility and captioning. For this reason it is recommended that apps allow the system to capture their playback.

Capture video and audio playback | Android Developers

Conversely, if the capture_rate was set to 20 and the framerate is specified as 10, then Motion will be detecting and processing every other image captured. The reason that the capture_rate is not systematically set to the framerate within Motion has to do with the camera. Each camera will provide a stream of images usually in some compression ...
