Viewing Guide To Outbreak Movie Answer Key

An outbreak, or epidemic, occurs when there are more cases of disease than would normally be expected in a specific time and place. The disease may be something doctors have already seen before just in a new form or abnormally high numbers, such as foodborne or healthcare-associated infections , or it may be an emerging disease that we don't know much about like SARS .

Outbreak Investigation: A Cheat Sheet | | Blogs | CDC

Answer 1: Yes, the outbreak is tapering off [Correct] You weren't fooled by the fact that a few people got sick after the spraying of insecticides. That's because West Nile virus has an incubation period of 4-10 days, meaning that those people were probably bitten before the spraying but didn't get symptoms until afterwards.
